PROFILE

Seasoned Java Backend Developer with 12 years of experience, skilled in building high-performance microservices, REST APIs, and cloud-native applications using Java, Spring Boot, and on-premise cloud and IBM Cloud. Strong in system design, API security, DevOps, and performance optimization, with a proven track record of delivering scalable enterprise solutions in Agile environments.

SKILLS

Tools and Languages Java, Spring boot, Rest API, Micro services, on-Premise cloud, IBM Cloud, OpenShift, API mesh, Radware Alteon NLB, Code fresh CI/CD And Aws Cloud.

TECHNICAL EXPERIENCE

Senior Software Engineer

IBM India Pvt Limited

April 2022 — Present

Bengaluru, Karnataka

- Designed and built scalable CRUD RESTful APIs by converting business requirements into clear data contracts and implementing clean, modular code. Improved service reliability, accelerated feature delivery, and reduced long-term maintenance.
- Developed reusable, configurable backend components supporting multi-tenant workloads, improving engineering efficiency and ensuring consistent behavior across services.
- Diagnosed and resolved complex backend and production issues, increasing system reliability and achieving a 95% efficiency rate in issue resolution.
- Deployed microservices on on-premises Kubernetes clusters to strengthen system resilience and support horizontal scaling, resulting in a 20% improvement in scalability.
- Automated key workflows and optimized service performance using tooling and tuning techniques, boosting operational efficiency by 15%.
- Contributed to engineering quality through API documentation, unit testing, and rigorous code reviews, reducing bug leakage and improving release stability in Agile sprints.
- Implemented CI/CD pipelines using Code Fresh and Boomerang, streamlining deployments and accelerating service delivery by 25%.

Software Engineer

Mphasis India Pvt Ltd

Mar 2019 — April 2022

Bengaluru, Karnataka

- Designed and implemented the Funds Transfer module across multiple banking channels to ensure seamless account-to-account transfers, improving transaction efficiency and customer experience.
- Implemented complex business logic, validation rules, and workflow engines in Spring Boot REST services, enhancing system accuracy, reducing errors, and ensuring consistent processing across modules.
- Wrote extensive unit tests (TDD) using JUnit 4 and executed full regression coverage to ensure stability of all impacted modules, reducing defect leakage and improving product reliability.
- Collaborated with cross-functional teams in an Agile environment, handled production issues, optimized existing services, and improved overall system performance and maintainability.

Software Engineer

Tech Mahindra India Pvt Ltd

Mar 2014 — Mar 2019

Bengaluru, Karnataka

- Developed multiple business functions and enhancements based on Jira requirements using Java 8, Spring Boot, and REST services, enabling faster delivery of features and supporting evolving business needs.
- Identified and resolved critical production defects across various modules by analyzing logs, debugging workflows, and optimizing service logic, significantly improving system stability and reducing customer-impacting issues.
- Implemented robust Spring Boot RESTful services and integrated them with JavaScript MVC and jQuery front-end components, improving response times and ensuring smooth user interaction across channels.
- Executed comprehensive unit testing using JUnit 4 and followed TDD-based workflows to validate business logic and service behavior, reducing defect leakage and improving overall code quality.
- Collaborated with cross-functional teams in Agile sprints, prepared documentation, participated in code reviews, and ensured timely, high-quality delivery for all back-end modules.

PROJECTS

Gold Tier Project – KYC Application

Technology: Java, Spring Boot, Microservices, Finet APIs, Kafka, Kafka Streams, Event Mesh, Docker, Kubernetes

Developed a KYC application with two key services: **Core Banking Service** integrated with the legacy core banking system through Finet APIs for customer and banking-related operations; and **GT Service** implementing event-driven communication using IBM Event Mesh and Kafka/Kafka Streams for reliable and scalable event processing between services.

Blaze FET – Retail Banking

Technology: Java, Spring Boot, REST APIs, Kubernetes

Developed and maintained APIs supporting retail banking products, including **Home Loans, Personal Loans, and Credit Cards**, covering business workflows, validations, and service integrations.

EDUCATION

Bachelor of technology, Jawar Lal Nehru Technology and university, Anantapur, Andhra Pradesh May 2012

ACTIVITIES

Certified from CDAC, Bengaluru Oct 2013
